

## **SBS Corp partners with Dassault Systèmes to deliver digital transformation solutions for the Indian manufacturing sector**

**Hyderabad, India – April 13, 2021** –[SBS Corp](#), a global IT product solution and consulting company, headquartered in Hyderabad with offices in Houston, USA and UK, and a value added reseller for [Dassault Systèmes](#), will provide Dassault Systèmes’ DELMIA applications powered by the 3DEXPERIENCE platform to large, small and medium-sized companies in the manufacturing sector in India. These solutions can fuel the digital transformation of manufacturing companies in domains of manufacturing execution system (MES), manufacturing operations management (MOM) and digital manufacturing across industrial equipment, aerospace & defence, transportation & mobility, consumer packaged goods and retail industries.

SBS Corp’s core offering for Indian manufacturing companies is the MOM solution- [MDSLite](#), built on top of DELMIA Apriso applications, that will help discrete manufacturers with visibility and control across the enterprise manufacturing operations and supply chain and helping them drive global best practices and continuous improvement while maximizing asset utilization. The MDSLite solution is implementable (Start to Run) in 8 weeks, covering 80% of the MOM functionality at 20% of the cost. These solutions will enable manufacturers to overcome the challenges they face on the factory floor and help them adopt the new norms and methodologies of digital factories and be ready for Industry 4.0.

**Niranjan Reddy, Co- Founder and Executive Partner, SBS Corp** said, “Manufacturers in India need to adopt an “Any Product, Any Plant” strategy to win in today’s globally competitive marketplace. This is enabled by four core elements of the MDS Lite solution- execution core, planning and optimization core, machine and system integration core and manufacturing intelligence, analytics and reports. We have the experience of working with Dassault Systèmes in North America and with trained resources on the domain of MOM we not only have the expertise in designing solutions for digital transformation in India but implementing and maintaining them as well.”

Dassault Systèmes’ **DELMIA Apriso** Global Manufacturing applications enable global management of processes, performance, and visibility, magnifying the impact of operational improvements across the whole enterprise. With **DELMIA Ortems** advanced planning software, manufacturing companies will be able to quickly identify bottlenecks, rapidly schedule modifications, and what-if simulations while simultaneously managing complex production runs or long cycle times. With the **3DEXPERIENCE DELMIA** application,

manufacturers will be able to create digital models that virtually simulate products, processes, and factory operations.
